

SUSTAINABILITY

- Our ambition is to deliver a highly sustainable building with extensive external greening.
- This scheme will lead the way in reaching our target to be a net zero-carbon business by 2030.
- We are committed to creating a BREEAM Excellent-standard building which means it is highly sustainable both in terms of construction and operation.
- The building will be designed with highly efficient floor plans to limit carbon emissions during the build.
- Our scheme will be designed with the welfare of those who live and work inside as paramount, creating a building which will be of value long into the future.
